## **DETAILED ACTION**

### **Acknowledgements**

1. In view of Applicants' Appeal Brief filed on July 9, 2010, and the argument presented, the Applicant's argument appear persuasive

### ***Allowable Subject Matter***

2. Claims 1, 2 and 4-40 is allowed.
3. The following is an examiner's statement of reasons for allowance:  

The closest prior art of records are U.S. Patent Application Publication No. 2006/0282834 A1 to Cheng; 6,123,737 to Sadwosky and 2001/0052052 A1 to Peng.
4. Regarding the claimed terms, the Examiner notes that a "general term must be understood in the context in which the inventor presents it." In re Glaug F.3d 1335, 1340, 62 USPQ2d 1151, 1154 (Fed. Cir. 2002). Therefore the Examiner must interpret the claimed terms as found on pages 1-23 of the specification. Clearly almost all the general terms in the claims may have multiple meanings. So where a claim term "is susceptible to various meanings, ...the inventor's lexicography must prevail...." Id. Using these definitions for the claims, the claimed invention was not reasonably found in the prior art.

5. The primary reference Cheng et al (U.S. Patent Application Publication No. 2006/0282834 A1) teaches a system, method and computer program product for uninstalling software on a computer.

Sadwosky teaches a system and method for deploying one or more software packages over a communication network. A push trigger is sent to a server computer 2. In response to the trigger, the server computer generates a notification package which is sent to at least one client computer over the communications interface.

Peng discloses an apparatus and method for providing coordinated and personalized application and data management for resource limited devices

Neither Cheng et al, Sadwosky nor Peng alone or in combination at least teach or disclose the claimed limitation determining authorization of the notification received in the mobile electronic device by determining, by comparison, whether the notification has previous verified or unverified records of the notification from a particular sender using the information sent by the electronic device, thereby avoiding testing of each notification and the mobile electronic device ignoring the available update from the particular sender if the notification history server confirms having an unverified record of a notification from the particular sender of the notification

Moreover, the missing claimed elements from Cheng et al are not found in a reasonable number of reference(s). Yet even if the missing claimed elements were found in a reasonable number of references, a person of ordinary skill in the art at the time the invention was made would not have been motivated to include these missing elements in an embodiment in the Cheng et al disclosure because: such would have

changed the basic working principles and the operation of Cheng which is silent with respect to determining authorization of the notification received in the mobile electronic device by determining, by comparison, whether the notification has previous verified or unverified records of the notification from a particular sender using the information sent by the electronic device, thereby avoiding testing of each notification and the mobile electronic device ignoring the available update from the particular sender if the notification history server confirms having an unverified record of a notification from the particular sender of the notification

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

7. The prior arts made of record and not relied upon is considered pertinent to applicants disclosure.

- Meyerzon et al (U.S. Patent No. 6,424,966 B1) discloses Synchronizing Crawler with Notification Source.
- Inakoshi (U.S. Patent No. 5,933,604) discloses Network Resource Monitoring system and Method for providing notice of changes in resources in a network.

- Kim et al (U.S. Patent No. 7,711,782 B2) discloses Event Notification Method in wireless communication system
